CODE SUMMARY - ALTERATIONS LEVEL 2

Project Description
This proposed project is Level 2 Alterations to an existing previously occupied building with a current or past Certificate of Occupancy issued by the Authority Having Jurisdiction (AHJ). This Level Alteration includes the elimination or addition of windows, elimination or addition of doors, the extension of a building system, and the installation of new equipment.

An addition to the existing structure is **not** proposed. The existing building is **not** in a Flood Hazard Area, and is **not** Historic.

This proposed project consists of the renovation of part of an existing building at 311 South Monroe Ave. and 320 East Pine Street. The existing structure is concrete masonry walls with some wood framing added and slab on grade. Existing partitions are wood. New partitions will be metal-framed. Roof framing is metal bar joists with a metal deck with intermittent metal beam/joist framing. Vertical building circulation will be provided by stairs, a ramp, and one (1) new elevator. **The building will be sprinklered.** The building consists of business spaces, a kitchen, restrooms, and storage spaces. The existing exterior finishes, painted CMU and board-and-batten siding will be retained on part of the building, while the 320 East Pine portion will receive EIFS. Existing steel windows will be replaced with aluminum storefront windows. New exterior doors will be hollow metal or storefront.

The proposed work under this permit includes a new sprinkler system, new offices, meeting rooms, and restrooms, as well as the construction of an elevator.

Failure to report inconsistencies will relieve Architect and Owner from any claim for additional work required related to the inconsistency.
2. Under no circumstances shall these drawings be used for shop drawings.
3. Work noted as "NIC" is not part of this contract and will be handled by Owner under separate contract.
4. Work not indicated on a part of the drawings, but reasonably implied to be similar to that shown at corresponding pieces, shall be repeated.
5. In case of conflict between the General Notes, Specifications, and Drawings, the most stringent requirements shall govern unless Architect instructs otherwise.
6. Not all details, equipment, systems, or materials sections are included in the documents. The Contractor shall base their bid on the supplied information, and shall also include any additional details, equipment, systems, or material required to deliver a complete and finished product to the Owner that are reasonably and normally included in a completed project of similar scope, in compliance with all laws, codes and ordinances.
7. Do not scale the drawings. Rely on written dimensions as given.
8. All interior dimensions shown on the plans are from face of stud unless otherwise noted. Exterior wall dimensions are from interior face of stud to exterior face of sheathing. Otherwise, all dimensions are from interior face of exterior wall to face of stud. Dimensions shown on floor plans, sections, elevations, and details are to face of stud, masonry, or concrete gridlines, unless otherwise noted.
9. All dimensions shown on the plans to accessible (ICC A117.1-2009) relevant building features/fixtures are from face of finish material (both floors and walls). Make special note of dimensions indicated as "clear" or "above finished floor".
10. Contractor shall obtain and maintain access on site to copies of all relevant code resources for reference. Editions shall be per the current version of the Virginia Construction Code (indicated in the code summary) and referenced standards per the Virginia Construction Code.

012100 ALLOWANCES

1. Lump sum allowances, unit-cost allowances, and quantity allowances shall include cost to Contractor of specific products and materials under allowance and shall include taxes, freight, and delivery to project site. Unless otherwise indicated, Contractor's costs for receiving and handling at project site, labor, installation, overhead and profit, and similar costs related to products and materials ordered by Owner or selected by Architect under allowance shall be included as part of the contract sum and not part of the allowance.
2. Contingency allowances are to provide an equitable way to reimburse Contractor for unknown costs associated with unforeseen events or systems during construction. Contractor's overhead, profit, and related costs for products and equipment under the contingency allowance are included in the allowance. These costs include delivery, installation, taxes, insurance, equipment rental, and similar costs. At project closeout, credit unused amounts remaining in the contingency allowance to Owner.
